

NO CONTACT

ThermaStop is a thermal isolation system used on the MFI-System and CI-System rain screen attachment assemblies. It delivers increased insulation effectiveness by reducing the contact between the wall and the rain screen bracket, with only a ribbed area of the isolator's base touching the wall substrate, significantly decreasing thermal bridging at that point of contact. There is no metal-on-metal contact. **Circle 408**

SHAPE UP

Circulation spaces needn't be boring. The Hex wall sconce can bring color and geometry to hallways, elevator lobbies and other public areas. This geometric, wall- or flush-mount LED fixture features warm, diffused illumination encased in a multi-colored, six-sided shape. The dimmable, ADA-compliant luminaire is offered in a variety of housing finishes and inner accent colors. **Circle 407**
